

# Manual scoring worksheet

Whitetail antlers | Inches and eighths | Read page 2 before measuring.

Buck ID / photo reference

Date measured / measurer

## 01 / Record the normal frame

### Measurement

### Left antler

### Right antler

Main beam

G1 / brow tine

G2

G3

G4

G5

Other normal points (sum)

H1 circumference

H2 circumference

H3 circumference

H4 circumference

Side subtotal (add above)

Inside spread (measured)

Spread credit (see page 2)

Gross frame subtotal

**Gross typical-frame subtotal = left subtotal + right subtotal + spread credit.**

This excludes abnormal points and does not apply net-score deductions. No automatic calculation.

**Estimate, compare and save your buck in RackScore.**

Photo scores and ages are estimates. Scan the QR code or visit [rackscore.us/download](https://rackscore.us/download).

# Measure with confidence

A personal worksheet, not an official score chart or certified result.

## 1. Prepare your measurements

Use a flexible, non-stretch measuring cable or suitable steel tape, a ruler and a pencil. Record to the nearest 1/8 inch. Use L/R consistently from the animal's perspective; enter 0 for absent normal points.

## 2. Follow the official measurement locations

Record each main beam and qualifying normal tine separately. Take four circumference measurements per antler. Missing tines and unusual growth can change measurement locations: consult the current official whitetail instructions instead of guessing.

## 3. Calculate the spread credit

Measure the widest inside distance between the main beams perpendicular to the skull centerline. For this typical-frame subtotal, spread credit cannot exceed the longer main-beam measurement.

## 4. Keep abnormal growth separate

Record unusual points below and confirm their classification using official guidance. This worksheet does not calculate net typical or non-typical scores. A photo estimate and a tape measurement are different records.

## 5. Use an official measurer for a record entry

A fresh-rack measurement is a preliminary green score. Boone and Crockett requires its designated Official Measurer for Awards Program entry and describes a 60-day drying period. Check current rules for your category.

Abnormal points / missing tines / measurement notes
